

Forklift Fork Positioner

Fork Positioner for Forklift - The fork positioner is a hydraulic apparatus that allows the the one driving to be able to work the lift truck without leaving the seat. They are made out of high quality materials and are meant to be able to withstand the most challenging procedures and work environments. Side shifting models have the added ability to laterally position the entire load or the arms so as to facilitate much more exact lifting and position in a faster and much more efficient manner.

The only one of its kind fork pocket design could enable the individual operating it to safely sway the unit's forks without any fear of damaging the positioning cylinders. This allows the worker the alternative to either perform independent or simultaneous fork movement, depending on the job requirement. For most forklifts with non-OEM carriages, complete carriages are needed. Standard OEM carriages can be transformed into blade positioners on available units.
