

Toyota Forklift Part

Toyota Forklift Part - Since 1992, Toyota Material Handling inc., U.S.A., also called TMHU, has been the best selling lift truck provider in the United States. This company has been situated out of Irvine, California for well over 40 years, providing a comprehensive line of quality lift trucks. With a remarkable reputation of resilience and reliability, Toyota lift trucks have thrived in the competitive resources handling market. Quality is the foundation of Toyota's legendary Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, located in Columbus, Indiana. The bulk of the Toyota lift trucks sold in the U.S.A are built here.

Every one of Toyota's manufacturing plants within Canada and the U.S. comply with the International Organization for Standardization or ISO 14001 standard. The Columbus TIEM plant has been honored on many occasions for its devotion to continuous development and its environmentally friendly systems. It is the first and only manufacturer to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. For example, the Toyota 8-Series IC lift vehicles emit 70% less smog forming emissions than the existing federal EPA standards and have complied with California's strict emission standards and policies.

TMHU, U.S.A. - Leading the Industry

Brett Wood, President of TMHU, links Toyota's achievement to its stout commitment to constructing the best quality lift vehicles while delivering the utmost customer service and support. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." TMHU's parent company, Toyota Industries Corporation, also referred to as TICO, is listed in Fortune Magazine as the world's principal lift truck supplier and is among the magazines prominent World's Most Admired Companies.

Redefining Environmental Accountability

Toyota's parent company, Toyota Industries Corporation, has imparted an exceptional corporate ideology towards environmental stewardship within Toyota. Toyota's rich history of environmental protection whilst retaining economic viability cannot be matched by other companies and unquestionably no other resource handling manufacturer can thus far rival Toyota. Environmental accountability is an important feature of company decision making at Toyota and they are proud to be the first and only producer to provide UL-listed, EPA - and CARB -certified Compressed Natural Gas powered lift vehicles. Yet an added reason they remain a leader within the industry.

Toyota originally released the 8-Series line of lift vehicles in 2006, again exhibiting its leadership and innovation in the industry. Featuring an exclusive emission system that eclipsed both Federal EPA emission principles, and California's more environmentally friendly emission standards. The finished invention is a lift vehicle that creates 70% less smog forming emissions than the existing Federal standards tolerate.

Also starting in 2006, collectively with the Arbor Day Foundation, Toyota added to its commitment to the environment. To this day more than 58,000 trees have been embedded in the ground throughout state forests and local parks that were damaged by fires and other environmental causes. 10,500 seedlings have also been distributed through Toyota Industrial Equipment's system of sellers to non-profit organizations and local consumers to help sustain communities all over the United States

Toyota's lift trucks offer improved durability, visibility, productivity, ergonomics, and all the foremost safety equipment that has made Toyota an industry leader. The company's System of Active Stability, also known as "SAS", helps lessen the chance of mishaps and injuries, in addition to increasing productivity levels while minimizing the likelihood of merchandise and equipment damage.

System Active Stability senses several elements that may lead to lateral instability and potential lateral overturn. When any of those conditions are detected, SAS immediately engages the Swing Lock Cylinder to stabilize the rear axle. This alters the lift truck's stability trajectory from triangular in shape to rectangular, providing a major increase in stability which substantially reduces the probability of an accident from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also aids to avoid injuries or accidents while adding stability.

SAS was initially introduced to the market on the 7-Series internal combustion products in 1999 and subsequently catapulted Toyota into the industry leader for safety. Since then, SAS has been built-in to most of Toyota's internal combustion machines. It is standard equipment on the new 8-Series. There are more than 100,000 SAS-equipped lift vehicles in operation, exceeding 450 million hours combined. The increased population of SAS-equipped vehicles in the field, along with obligatory operator instruction, overturn fatalities across all brands have decreased by 13.6% since 1999. Additionally, there has been an overall 35.5% drop in industry wide collisions, loss of control, falls and tip overs from a lift truck for the same period.

Toyota's measure of brilliance reaches far beyond its technological achievements. The company maintains an extensive Operator Safety Training program to help purchasers meet OSHA standard 1910.178. Training services, video tutorials and various resources, covering a wide scope of subjects-from personal safety, to OSHA policies, to surface and cargo conditions, are available through the seller network.

Ever since the transaction of its first lift truck in the U.S. to the construction of its 350,000th lift vehicle produced in 2009 at Toyota Industrial Equipment Manufacturing, TMHU has continued a solid presence in the U.S. This fact is demonstrated by the statistic that 99% of Toyota lift trucks sold in America today are built in the United States.

Situated in Columbus, Ind., the Toyota Industrial Equipment Mfg. campus equals 998,000 square feet of facilities across 126 acres.

Facilities include a National Customer Center, as well as production operations and distribution centers for equipment and service parts, with the entire investment exceeding \$113 million dollars.

The new NCC was designed to serve TMHU customers and sellers. The facility includes a 360-degree display room, a presentation theater complete with stadium seating for 32, an section for live product demonstrations with seating capability for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's history since the birth of its originator, Sakichi Toyoda, in 1867, and finally a education center.

The NCC embodies Toyota's commitment to providing top-notch consumer service. TMHU's 68 sanctioned Toyota Industrial Equipment, or TIE dealers, along with 189 dealership locations all over the U.S, supply the most wide-ranging and inclusive customer service and support in the industry. The company's new and Licensed Used lift vehicles, service, components, and financing features make Toyota dealerships a one-stop shop to ensure total consumer satisfaction.
