The U.S. lift Truck division based in Cleveland has a skilled team experienced in Sales, Purchasing, Advertising, Logistical and Technical Support.

Originally the domestic forklift marketplace in Korea was an open import enterprise. Korea Machinery Co. Ltd. started in 1960, to import fully assembled forklifts as part of a domestic equipment expansion project. Sales of these products were initially targeted to state-run companies, large scale corporations, and the military. This eventually led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced business operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck production plant was successfully completed. Continuous technical education grew to become the new focus for improving quality and product development.

Daewoo began the first home-based forklift business in 1967, and rapidly gained a massive 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's sophisticated technological enhancements combined with sales success placed them in a position of considerable expansion of their lift truck operations.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a joint venture project to help them in the very competitive North American materials handling market. This project proved highly successful for Daewoo and their forklift sales expanded greatly. In 1984, the company finished development of a new facility to help in manufacturing high end value-added goods for export. In 1993, the corporation had a international sales network and started exporting designs they had established through in-house technology, as an independent product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into overseas markets.
